

HOW ODINT

Helped a Leading Public Health Company to Form a Mobile Care Platform to Incorporate Field Force

BACKGROUND

A leading well-being organization moved toward ODINT. The patron was planning to form a medical care mobile platform to incorporate field force. The aim was to assemble a versatile first well-being platform that will be utilized for patients visiting public health suppliers.

HOW DON'T APPROACH THIS PROBLEM

Information Researchers Collaboration

Our experts and information researchers collaborated, and we accompanied an answer.

Space of Concern

On one single joint stage, the primary spaces of concerns were incorporating patients, professionals, and field power laborers.

Whole Work Process

We attempted to outline the overall work process that covered enlistment, arrangements, clinical history, fundamental audits, vitals, and care plan just as plan obedience.

Using AI And ML

With AI and ML, mapped all the gadget units to a clinical room.

Data Collection

After data collection, we had the option to gauge what type of care plan will be ideal for a specific patient.

SOLUTION ACHIEVED

01

Records

Our team had the option to store all the wellbeing records just as other vitals.

02

Other Information

The wide range of various wellbeing related information.

03

Analysis

Additionally, with our technology, we had the option to share health records and analysis information safely.

04

Care Plan

Using optimization, patients were given the right "care plan".

05

Objectives

That comprises medicine, way of life changes just as all objectives.

06

Dashboard

We set up a board that assisted centers and how the patients react to vitals and medicines.
